

Hasan Chadaram

Software Engineer | Java | Spring Boot | Distributed Systems

Hyderabad, Telangana, India | +91 6281079746 | hasanchadaram888@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Software Engineer with 3 years of experience building scalable backend applications and distributed systems using Java and Spring Boot. Experienced in microservices, Apache Kafka, Kubernetes, PostgreSQL, Elasticsearch, and cloud platforms (GCP, Azure). Strong background in system performance optimization, asynchronous workflows, and event-driven architectures.

Technical Skills

Languages: Java, Python, JavaScript, SQL, C++, C#

Backend & Frameworks: Spring Boot, Spring Framework, Microservices, REST APIs, Django

Databases, Messaging & Search: PostgreSQL, Cassandra, Elasticsearch, Apache Kafka, RabbitMQ, Redis, Supabase

Cloud & DevOps: Kubernetes, Docker, Google Cloud Platform (GCP), Microsoft Azure

Testing & Tools: JUnit, Git, GitHub, K6

Professional Experience

Candescent (formerly NCR Voyix)

Software Engineer

May 2023 – Present

Hyderabad, India

- Optimized a high-throughput transaction processing workflow using Java and Spring Boot, reducing algorithmic complexity from exponential to linear and improving bulk-operation performance.
- Reduced perceived latency through asynchronous microservice orchestration using Spring Boot and Apache Kafka, decoupling heavy processing while maintaining transparency and security.
- Refactored a legacy reporting system to improve readability, modularity, and extensibility, reducing development complexity by **30%** and accelerating feature delivery cycles.
- Implemented **Point-In-Time** (PIT) search in Elasticsearch for consistent, reliable data retrieval during live pagination in distributed environments.
- Deployed and managed **30+** microservices on Kubernetes with resource constraints and secret management.
- Tech stack: Java, Spring Boot, Microservices, JUnit, PostgreSQL, Elasticsearch, Docker, Kubernetes, GCP

Copart

Software Engineer Intern

Oct 2022 – Apr 2023

Hyderabad, India

- Migrated messaging architecture from RabbitMQ to Apache Kafka, improving system throughput and enabling scalable event-driven processing across distributed services.
- Upgraded **5+** microservices to newer Spring Boot versions, enhancing security, maintainability, and compatibility across services.

Projects

Day Fuel | *React Native, Supabase, PostgreSQL, Redis, Gemini API*

Sep 2026

- Built an AI-powered nutrition tracking app for Indian meals, enabling text and image-based food logging with semantic food matching using **vector embeddings**.
- Designed backend using Supabase Edge Functions and PostgreSQL with Redis-based rate limiting, idempotency, circuit breakers, and fault-tolerant API handling.

Distributed Notification Platform | *Java, Spring Boot, Kafka, Kubernetes, PostgreSQL, Redis, Azure*

Jul 2026

- Designed and implemented a distributed notification platform using Spring Boot, Apache Kafka, Redis, and PostgreSQL with idempotent consumers, retry mechanisms, dead-letter queues, rate limiting, and observability dashboards using Prometheus & Grafana; containerized with Docker and Kubernetes, load-tested with K6.

Education

KL University

B.Tech in Computer Science Engineering

June 2019 – June 2023

CGPA: 8.6

Achievements

Recognition: Awarded “Pat On Back” recognition at Copart for impactful engineering contributions.

Mentorship: Mentored junior developers through structured coding sessions at KLU Official Student Body.

Leadership: Led a cross-departmental team to successfully organize a national-level fest.
